

Fix QuestaSim/ModelSim default code editor

1. Reset Verilog file default executioner. This can be done by manually deleting the associated registry keys (using REGEDIT) or by executing the reg file named “Reset Verilog Files.reg”.
2. Open QuestaSim (or ModelSim) as administrator as shown (in the search menu) or from the executable shortcut (right click and choose “Run as administrator”):

3. From the “Help” menu, choose “Register File Types”.

4. Restart QuestaSim (or ModelSim) and everything should work as intended.
5. Extra: to reset the icon of the Verilog files in the file explorer, either restart the computer or open task manager by pressing “Ctrl + Shift + Esc” on the keyboard and while opening any folder, find “Windows Explorer” then right click it and restart it.
